

Why Most Enterprise AI Stalls at Pilot?

The problem isn't the model!

Why most enterprise AI fails beyond pilots

Most pilots start bottom-up: build the bot!

This works for:

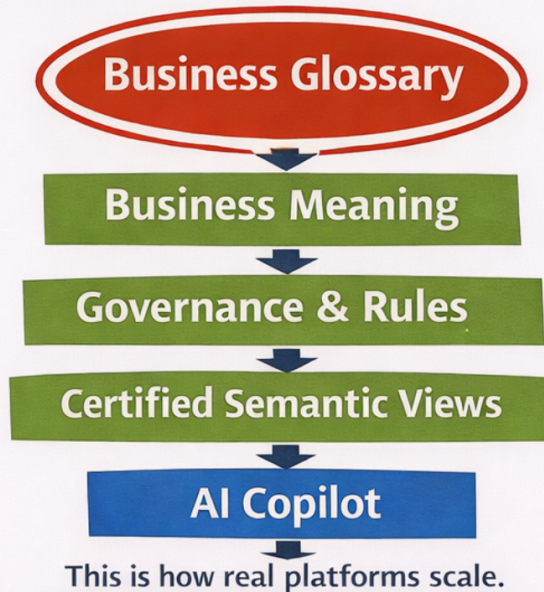

- ✓ hackathons
- ✓ innovation days
- ✓ demos

It fails in enterprises because nothing above the model is agreed, governed, or trusted.

- ✗ Immediate stakeholder conflict
- ✗ Trust collapse the first time numbers don't match reports
- ✗ Audit, risk, & compliance shut it down
- ✗ Pilot never clears governance gates → quietly dies

Why the governed (top-down) approach works

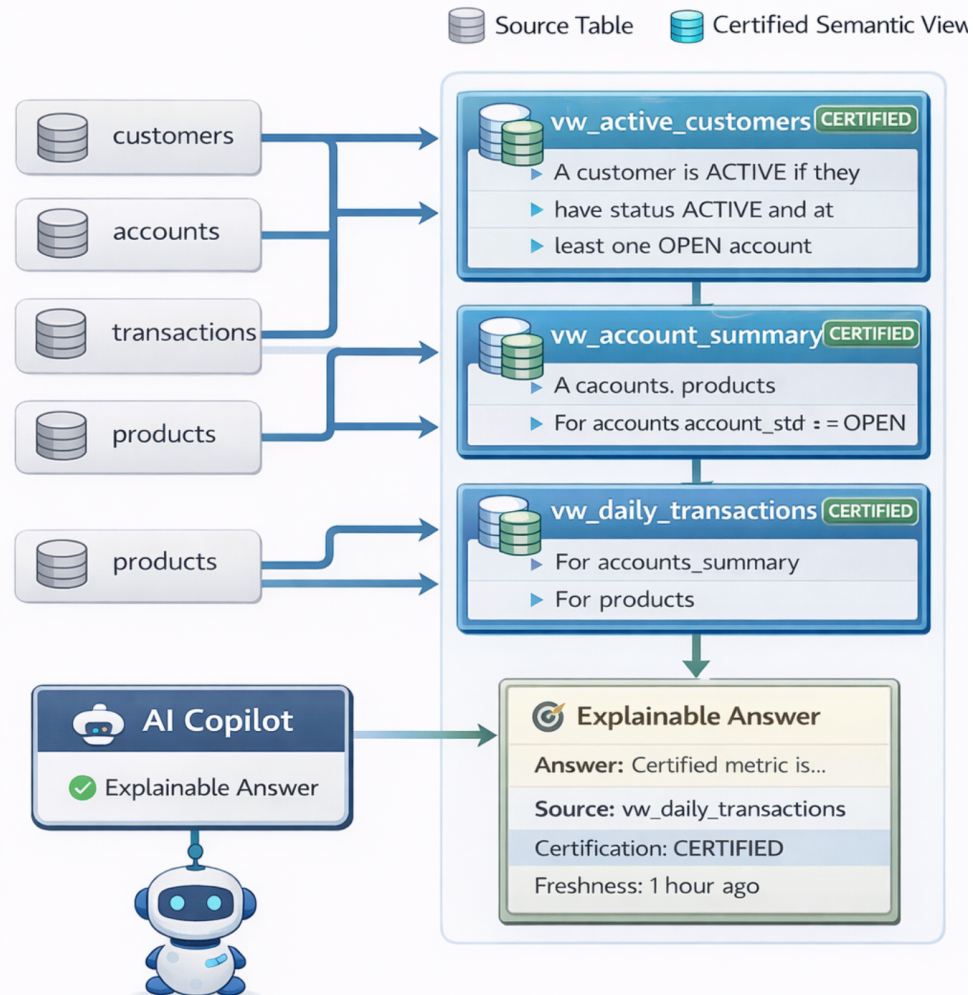

1. Meaning is agreed before automation
2. Governance is executable
3. Semantic views become the AI contract

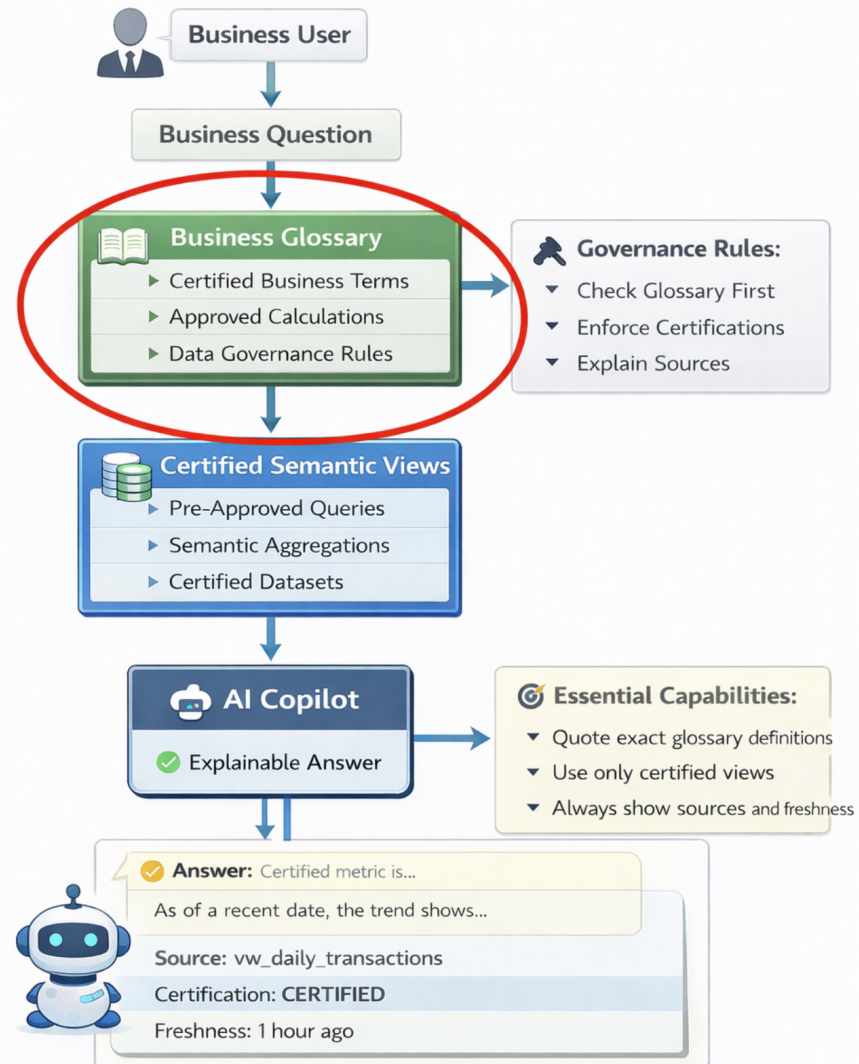

What Enterprises Actually Need

Governed Data Lineage for Enterprise AI Copilot (Concept Lab)

The Governed, Top-Down Approach

Governed Enterprise Data Copilot: Conceptual Blueprint

From Laptop Lab to Enterprise Scale

Air-lab “AI Data Copilot” is designed to demo this top down approach

AI Data Platform: Local Lab vs Enterprise Stack
